The Cornell Ocean Research Apprenticeship for Lynch Scholars (CORALS) is a spring semester program with components held on the Big Island, HI and Friday Harbor, WA. Advanced students with a strong interest in marine biology will delve into projects alongside peers, graduate students, and researchers that share a passion for studying the ocean and its biodiversity. In addition to working on guided independent research projects, students will take courses on invertebrate biology, conservation oceanography, and climate change.

**Coursework/Project Topics:**
- Seagrass Ecology
- Coral Reef Ecology
- Marine Invertebrate Biology
- Bioacoustics and Diversity of Plankton
- Bioacoustics and Humpback Whales
- Climate Change and the Ocean

Cost of attendance is no more than standard Cornell tuition respective to your college. Cost of travel is reimbursed. Student financial aid applies.
